

QUANTUM

COMMUNITY EDITION

WATERGOESRED

GAME OVERVIEW

WINNING

You win immediately when you place your final quantum cube.

Place cubes by moving ships into orbital positions to conquer planets, or by attacking enemy ships to gain dominance and achieve infamy.

TURN SEQUENCE

Players take turns clockwise. Each turn has two phases:

1. Use actions and ship abilities

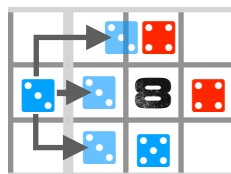

Use up to 3 actions. Each die on the map may move once and use one ship ability.

2. Take cards

Take face-up cards for conquering planets and increasing your research.

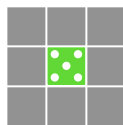

KEY CONCEPTS

- **Movement:** Ships move orthogonally, but cannot move through planets or ships. Ships attack by moving halfway into an enemy ship's space.

- **Adjacent:** The 4 orthogonal spaces next to a ship or planet.

- **Orbital positions:** The 4 adjacent spaces next to a planet. Ships use orbital positions to conquer planets.

- **Surrounding spaces:** The 8 spaces around a ship or planet (orthogonal and diagonal).
- **Once per turn:** Only once on your own turn.

SETUP

MAP

- Choose a map layout and set it up. See the basic maps right or the advanced maps below.
- Create the Expansion deck by taking Expansion cards equal to the number of players plus 1. Set the rest aside. Place the deck face-up by the map.
- Shuffle the light Skill deck and the dark Tactic deck. Place each deck facedown by the map.
- Deal 3 Skill cards and 3 Tactic cards face-up in a line from each facedown deck.
- Place an attack die and defence die by the map.

EACH PLAYER

- Take:
 - a player board
 - 1 missile
 - 7 dice and 5 quantum cubes of a matching colour (some maps require 6 or 7 cubes).
- Place a die in your dominance and research boxes. Set both to **1**.
- Place 2 dice in your reserve (beside player board).
- Draw 2 Skill cards, select 1 and return the other to the bottom of the Skill deck.
- Roll the 3 remaining dice as your starting ships. You may re-roll once, but must re-roll all 3.

DEPLOYMENT

The player with the lowest total value of their 3 ships is the first player. Resolve ties with a die roll.

Starting with the first player and proceeding clockwise:

- Place one of your quantum cubes on one starting planet (underlined) on the map.
- Place your starting ships in orbital positions around that planet.

TURN PHASE 1

USE UP TO 3 ACTIONS

You may choose the same action more than once:

- **Conquer:** Place a quantum cube on an empty planet location if you don't already have one on that planet and the values of your ships in orbital positions sum exactly to the planet's number. (Costs 2 actions)
- **Deploy:** Take a ship from your scrapyard (keeping its rolled value) and place it in an empty orbital position of a planet that has one of your cubes. This does not count as that ship's move for the turn.
- **Move / Attack:** Move one of your ships on the map orthogonally up to a number of spaces equal to its value. Each die can move once per turn, even if it changes ship type. Ships cannot move through planets or ships. You can attack an enemy ship by moving halfway into its space as part of your move. A ship's movement ends when it attacks.
- **Reconfigure:** Re-roll one of your ships on the map or your scrapyard. You may continue re-rolling until the die shows a value it has not had this turn.
- **Research:** Gain +1 research (maximum , minimum .

After using 3 actions, you may still use ship abilities and card effects.

ATTACK PROTOCOL

The attacker rolls the attack die and the defender rolls the defence die. Each adds their combat roll to the value of their ship. The lower total wins (attacker wins ties). You may spend a missile at any time to change any player's combat roll to a .

- If the defender won, the attacker is repelled back to its last space. No dominance is gained or lost.
- If the attacker won, the attacker gains +1 dominance (maximum ) and the defender loses -1 dominance (minimum ). The defender re-rolls their defending ship, placing it in their scrapyard. The attacking ship may move into the defender's space or back to its last space.

INFAMY

If your dominance reaches , reset to  and immediately conquer any planet without one of your cubes. Ignore orbital positions.

QUANTUM ENTANGLEMENT

If every planet with an empty location already has one of your quantum cubes, then you may conquer planets that already have your cubes but must increase the planet number by 3 per cube you already have there.

USE SHIP ABILITIES

Each ship type has a special ability. Each die can use one ability per turn, even if it changes ship type.

The flagship and interceptor abilities are used as part of a move / attack action. All other abilities cannot be used during an action. Only your ships on the map may use abilities, and only in Phase 1 of your turn.

BATTLESTATION: FREE ATTACK

Move the battlestation 1 space to attack an orthogonally adjacent enemy. This could allow the battlestation to make two attacks in the same turn (the other by a move / attack action).

FLAGSHIP: CARRY & MOVE

Choose one of your ships in a surrounding space and place it on your flagship. Use the flagship's move action to move at least 1 space, then place the transported ship in any surrounding space. The flagship cannot attack during this move, but the transported ship may move and attack normally after being placed.

DESTROYER: SWITCH PLACES

Swap the destroyer's place with one of your other ships on the map.

FRIGATE: CHANGE TO OR

Change the frigate to a destroyer or interceptor.

INTERCEPTOR: MOVE DIAGONALLY

Allows the interceptor to also move and attack diagonally.

SCOUT: FREE RECONFIGURE

Re-roll the scout until you get a new number.

TURN PHASE 2

TAKE CARDS

CONQUEROR

For each planet conquered this turn, take a card.

RESEARCHER

If your research is at , reset it to  then take a card.

CARD PROTOCOL

When you take a card, select from the face-up cards:

- **Skill:** Take effect on the next player's turn. If you have more than 3 Skill cards, immediately discard one.
- **Tactic:** Resolve immediately, then discard.
- **Expansion:** Immediately deploy a die from your reserve, then discard.

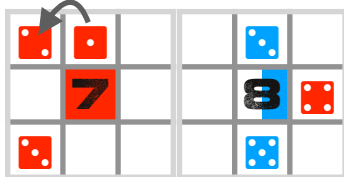

After taking a face-up card, slide the remaining cards away and place a new card next to the deck.

PEEK

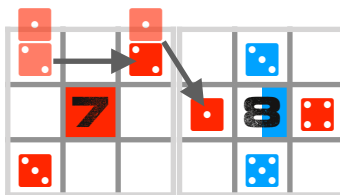

If you select the farthest face-up Tactic or Skill card from its deck, you may first peek at the top card of that deck and take it instead.

5 cubes, +3 slack
6/9 planets shared

PLANET TILES

- The planet number is used when conquering and indicates how many empty cube locations it has: **7** = 1, **8** = 2, **9** = 3, **10** = 4.
- **0**: The void tile contains no planet or cube locations. Instead, at the start of your turn, gain +1 research for each ship on it.

ADVANCED MAPS

Once you're familiar with the game, explore the advanced maps on the following pages.

MAP STATS

Each map includes a few simple stats to help you choose the style of game you're looking for:

- **# cubes**: Starting quantum cubes per player. More cubes means a longer game.
- **# slack**: Spare cube locations if everyone could place all their cubes. Higher slack gives more flexibility in which planets to conquer.
- **X/Y planets shared**: X planets must be shared if everyone could place all their cubes among Y planets that start with empty cube locations. Higher values mean players are more likely to conquer the same planets.
